- **Changes specific to r160308**:

  Bug Fixes

1604084695	Clk slice programmed as DEF_OFF CCU was incorrectly expecting clkreq to be driven to 0 during a global reset.
1404117042	Get clock period api was using incorrect parameter to check max number of slices
1404276899 1604066067	LIRA error caused by missing default value
1404530799	CCU CRG default string for domain name added to avoid warning / errors on some VCS versions

  Notes:
  Other minor updates made to the tool versions for validating ccu vc, will regress against more tool versions if requested by customers.
